

Transformer Brackets

We supply a wide range mounting brackets designed to suit all manufacturers and sizes of transformers and switching units. Many styles are available from stock which suit the most used transformer designs in Airfield lighting. These are tough and easy to install in service pits on the airfield. Custom made brackets are available on request for transformers right up to 300W.

Earth Bonding Strips

4mm thick solid copper bonding strips with 3 or 7 connectors for use in airfield lighting pits to bond primary cables. Use for the connection of circuit protection, main bonding, and functional earthing conductors.

A bolted link facilitates testing of earthing resistance. Manufactured from solid hard drawn copper and for ease of installation all terminals are captive.
